## PANEL OF EXAMINER APPROVAL

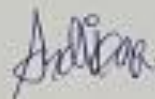

The Panel of Examiners declare that the undergraduate thesis entitled "AquaAlert : Real-Time Object Detection Application Using Webcam for Daily Reminder to Drink Water Using TensorFlow with Convolutional Neural Networks Algorithm" that was submitted by MUHAMMAD YOGA PRATAMA majoring in Informatics from the Faculty of Computer Science was assessed and approved to have passed the Oral Examination on Saturday September 16, 2023.

Panel of Examiner

Dr. HASANUL FAHMI M. Kom.

Chair of Panel Examiner

ANDIKA CANDRA JAYA

Examiner I

## STATEMENT OF ORIGINALITY

In my capacity as an active student at President University and as the author of the final project stated below:

Name : MUHAMMAD YOGA PRATAMA

Student ID number : 001202000178

Study Program : Informatics

Faculty : Computer Science

I hereby declare that my final project entitled **“AquaAlert: Real-Time Object Detection Application for Daily Reminder to Drink Water Using TensorFlow with Convolutional Neural Networks”** is to the best of my knowledge and belief, an original piece of work based on sound academic principles. If there is any plagiarism detected in this final project, I am willing to be personally responsible for the consequences of these acts of plagiarism and will accept the sanctions against these acts in accordance with the rules and policies of President University.

I also declare that this work, either in whole or in part, has not been submitted to another university to obtain a degree.

Cikarang, September 2023

Muhammad Yoga Pratama

**SCIENTIFIC PUBLICATION APPROVAL FOR ACADEMIC  
INTEREST**

As an academic community member of the President's University, I, the undersigned:

Name : MUHAMMAD YOGA PRATAMA

Student ID number : 001202000178

Study program : Informatics

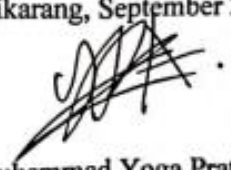

for the purpose of development of science and technology, certify, and approve to give President University a non-exclusive royalty-free right upon my final report with the title:

**“AquaAlert : Real-Time Object Detection Application for Daily Reminder to Drink Water Using TensorFlow with Convolutional Neural Networks”**

With this non-exclusive royalty-free right, President University is entitled to converse, to convert, to manage in a database, to maintain, and to publish my final report. There are to be done with the obligation from President University to mention my name as the copyright owner of my final report.

This statement I made in truth.

Cikarang, September 2023

  
Muhammad Yoga Pratama

**ADVISOR APPROVAL FOR JOURNAL/INSTITUTION'S  
REPOSITORY**

As an academic community member of the President's University, I, the  
undersigned:

Name : Cutifa Safitri, Ph.D.

ID number : 20190900815

Study program : Informatics

Faculty : Computing

declare that following thesis:

Title of thesis : **AquaAlert : Real-Time Object Detection Application  
for Daily Reminder to Drink Water Using TensorFlow with Convolutional  
Neural Networks**

Thesis author : Muhammad Yoga Pratama

Student ID number : 001202000178

will be published in **journal / institution's repository / proceeding /  
unpublished.**

Cikarang, 2023

Cutifa Safitri, Ph.D.

## **ABSTRACT**

With the rise of deep learning and the improvement of computer vision, object recognition has become a popular study topic. This is mostly because of convolutional neural networks (CNNs). By using a lot of labeled data, CNNs have shown that they are good at finding and predicting things in pictures. This project uses this skill to solve a common health mistake made by office workers: not drinking enough water every day. The Ministry of Health stresses how important it is to drink enough water for your body weight. Still, many workers forget about this health tip because they are too busy with their daily work.

The main goal of this project is to set up a real-time object recognition system that will tell these people to drink water at the right time. Built on the flexible TensorFlow framework, the system is designed to be as efficient as possible, so it can work even on machines with less powerful hardware. The only thing you need to use it is a webcam, which makes it a useful and easy-to-use option.

The project was inspired by real-life experiences during an internship. It also takes into account the fact that workers often don't drink enough water because of their busy work schedules, even though they work in air-conditioned settings that make thirst worse. This mistake can lead to health problems like dehydration, heart problems, and stomach problems. The suggested system is meant to fit right into their work surroundings, reminding them to drink water regularly and helping them live a better life at work. By combining cutting-edge technology with a basic health need, this program aims to get people to drink more water, which will improve their health and comfort at work in the long run.

***Keywords: Object Detection, Convolutional Neural Networks, TensorFlow, Real-Time, Drink Water***

## **ACKNOWLEDGEMENT**

I want to express my sincere gratitude to the following people for support me to finish this final project:

1. I want to express my sincere gratitude to Allah SWT for all of His guidance and favors during this final project. I've gained bravery and strength from his unwavering love and support..
2. Myself, I am proud of the effort and commitment I put into this final project so I can finish it on time.
3. My advisor, Ms. Cutifa Safitri, Ph.D., for her invaluable guidance and support throughout the process. Her expertise and dedication were instrumental in making this final project a success.
4. My family, for their support and tolerance throughout this period. Their steadfast assistance serves as a continual source of encouragement and inspiration.
5. For Ade Aya Po, thank you for all the support emotionally and effort in helping this final project until can be finished on time.
